Serial No.: 09/882,597 Group Art Unit 2157

AMENDMENTS TO THE CLAIMS

Please amend the claims as indicated hereafter (where underlining "_" denotes additions and strikethrough "-" denotes deletions).

Claims:

(Previously Presented) A method of manipulating email messages with an email 1. network appliance comprising:

receiving an email message, the email message having had all attachments automatically unconditionally deleted such that the email message is text only;

classifying the text only email message; inserting the text only email message into a classification container; and presenting the classification container in a classification display section.

- 2. (Original) The method of claim 1, further comprising prompting a user to save a sent email message.
- (Original) The method of claim 1, wherein the email network appliance 3. comprises an apparatus comprising a scrollable line display capable of presenting at least six lines but no more than fifteen lines.
- (Original) The method of claim 1, wherein the email network appliance 4. comprises an apparatus connected to a public switched network via an RJ-11 interface.
- (Original) The method of claim 1, wherein the email network appliance 5. comprises an apparatus comprising a keyboard.
- 6. (Original) The method of claim 1, wherein the email network appliance comprises an email Internet appliance.

Serial No.: 09/882,597 Group Art Unit 2157

- 7. (Original) The method of claim 3, further comprising prompting a user to save a sent email message.
- 8. (Original) The method of claim 6, further comprising prompting a user to save a sent email message.
- 9. (Original) The method of claim 1, wherein the display classification section comprises at least two sections, each section containing one classification container.

10-19. (Cancelled)

- 20. (Previously Presented) The method of claim 1, further comprising reading a text only email message in a classification container, wherein all reading is performed off-line.
- 21. (Previously Presented) A system of manipulating email messages: a server configured for receiving a plurality of email messages for a user, and for deleting all attachments for all email messages received for a user; and a transmitter for transmitting the emails to a user.
- 22. (Previously Presented) The system of claim 21, further comprising: a client configured for receiving email messages from a server, for classifying each of the plurality of email messages, for inserting the email message into a classification container; and for presenting the classification container in a classification display section.
- 23. (Previously Presented) The system of claim 22, wherein the client is housed in an email network appliance.

Serial No.: 09/882,597 Group Art Unit 2157

- 24. (Previously Presented) The system of claim 23, wherein the email network appliance comprises an apparatus connected to a public switched network via an RJ-11 interface.
- 25. (Previously Presented) The system of claim 23, wherein the email network appliance comprises an apparatus comprising a keyboard.
- 26. (Previously Presented) The system of claim 23, wherein the email network appliance comprises an email Internet appliance.
- 27. (Previously Presented) The system of claim 22, wherein the client is further configured for prompting a user to save a sent email message.
- 28. (Previously Presented) The system of claim 22, wherein the display classification section comprises at least two sections, each section containing one classification container.
- 29. (Previously Presented) The system of claim 22, wherein the client is further configured for presenting an email message in a classification container, wherein all presentation is performed off-line.

30. (New) A method of manipulating email messages with an email network appliance comprising:

receiving an email message, the email message having had all attachments automatically unconditionally deleted such that the email message is text only;

2006-08-10 14:46:28 (GMT)

classifying the text only email message;

inserting the text only email message into a classification container;
presenting the classification container in a classification display section
comprising at least two sections, each section containing one classification
container;

presenting a text only email message in a classification container, wherein all presenting of the text only email message is performed off-line and prompting a user to save a sent email message;

wherein the email network appliance comprises a handheld email Internet appliance connected to a public switched network via an RJ-11 interface, the appliance further comprising a keyboard and a scrollable line display capable of presenting at least six lines but no more than fifteen lines.
